Data are entered into the Norpac Working Tables and are periodicall loaded into the production database contingent on passing rigorous data quality error checking.

3.3 LOAD WORKING TABLES
Data files from observers at sea are detached from the email carrier, decrypted and loaded by SQL Loader into the production working tables.

3.1 BATCH DATA VALIDATION AND LOAD
Data loaded into the Norpac Working Tables by at sea transmission or fax are checked for errors and loaded into the production database. Errors are logged, if successful (no fatal errors found) the working tables are purged.

3.2 DATA VALIDATION
All raw data are filtered through error detection software. Only data that is fatal error free are loaded into the production database.
