6-22-56
At Unalaska Idle -
Tordenskjold came in today
found small shed
Concer (magister probably)
of about 1" -
Tordenskjold took large
type herring in Bering Sea
in gill nets last week.

6-23
Unalaska - Penguin in
today & Tordenskjold left
for last station & Adak -

6-24
Unalaska
Small schools of 8" herring
in Bay for last few days
Saw a ball of crabs
ca 2-3" long at mouth of
creek - 100-200 #
Went fishing with
Walter Kiskanoff & at
Wide Bay, Cider Point &
near Hog Island. Many
dollies by Cider point
feeding on krill (?)
Shot 3 sea lions & caught
3 halibut.

6-25
Unalaska - still diving
with Dove-munro &
Haddi Aji wani (sp!)
Used night lighting
just after dark - saw
nothing (in 20 min) that
looked like crabs
Weather has been fairly
flat, low clouds and
flurrs. when it was clear.
Haddis Dove getting a
sockeye per night -
also caught harbor porpoise
last night & large
Alpisaurus last week
(bandsaw fish)

6-26
Trying for plane to Adak
low ceiling - may not
make it

6-28

Tordenskjold unloading at Adak

Met with Japanese at Admin. Bldg 1:30 P.M.

Japanese can stay as long as one week - want to know how long U.S. vessels available.

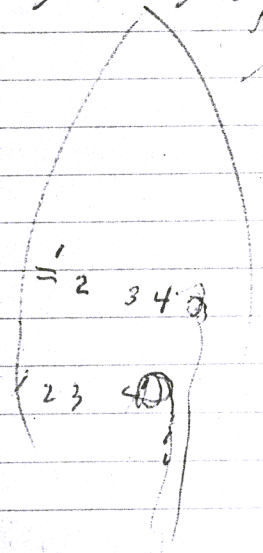
6-29

Set 80 fathom of 30 fath each between 10 & 1020 am. Made single marker cast on 137 wire hand powered - also ½ m vert plankton tow many copepods - 250 cc

Cast Brisa net from short boom & rigged for surface tow with double block —

Bring net in on V shape with roller - bridle on long hanging

Pull cable of slack by hand and pull out tank slowly by passageway



1 hr 10 min hauling

3 fish (Sockeye)

vessel (Eiko maru)
carries 15 crew, 8 students,
1 teacher & 1 biologist
Vessel has voice & cw
radio, radar, wind dir/vel,
no auto steering or loran
windshield wiper, direct
engine controls & no signal
controls, variable pitch
propeller.

Set nets from stern
roll over humped roller
to spread leads & corks -
man on each stern quarter
in outboard racks with
sticks to keep net straight
set at 7 knots ± & looks like
a dangerous situation - men
working in well can tangle
& go over with net - there
were 3 in well

for hauling have a 30' (ca.)
v sheave with idler
at left forward end of well
deck ahead of house. Vessel
runs up on net and jerks
like tuna long line.
Had long lead line hangings
to a double lead line - L & R
lay bound together so that
net doesn't come through
hauler - pull corks by
hand - this spreads net
so fish are easily removed
The net is then pulled
across deck to Starboard
~~so that~~ and lines coiled.
Coils are reversed & net
is dragged down companion
way to stern & stacked - they
have high portable rollers
to keep net off companionway
deck.

6-30-56

Jordinskjold unloaded & boxed most of fish yesterday will get remainder out monday 7/2 - took 12 japanese out on our two vessels & today

7-1

~~Sunday~~ ~~Saturday~~ - saw fish hatchery - got some good looking 1 & 2 yr old steelhead - showing about some growth as marcus Parks - water seldom breaks 50° & drops to 32 - Eleland is really hot for fishing - the personnel are, that is. Have about 70,000 2 yr fish - all in troughs -

~~7/2~~

Neave, Peterson & Kasahara departed for Anchorage - moved aboard Tordinskjold -

7/2

~~Completed~~ unloading fish & Transfer of samples to Japanese -

7/3

Taking oil for departure -

Crabs mostly small - 130-150 mm, new shell; Females new with eggs but not soft.

16

Aboard Tokei Maru discussed tagging with S. Kawasaki - he expressed opinion that our tag tubing was perhaps too coarse (1956) and his wire too thin. He has had few recoveries apparently and has tagged more this year. Two recoveries from '54 tagging so far (his tags) he gave me 31 tags from their 56 catch which Tak put out in '55.

He samples small samples 20± crabs from a catch & gets a total of several thousand per year; using same points of measurement as we are.

Tokei had 2 scout vessels 6.5± tons & 8 Kawasaki boats. Sling aboard overnight. Crabs come into Tokei over port stern.

10/14
Lv Kodiak & Wakefield 11:00
Arr. Port Wakefield 11:30

Talking to Red Stevens -
he showed us the results
of growth from tagging. To
date the returns are from
large males and females
of over 150 mm. The males
showed a growth of 25 mm
(from memory) and the females
less than half of that. He
averages length and width
for initial size & growth in
length & width for growth.
He has some uneveness
in amount of growth for
crabs of various sizes.
His crabs seem to have
shown little migration.

He says he is leaving A.D.F. about
next August.

Talking to Hiram McAllister he
said he's now fishing in 90-100 f
of water - running 55± pots, had
530± crabs for a one day soak.
Has and otter-trawl aboard mostly
for catching bait. Was baiting
with bullheads chiefly, & flounders.
It appears that a heavy stock
of bullheads is found here.
Hangs fish to tie seconds on
a big wire safety pin gadget
in pot.

Crabs look large & well filled
run around 12#/dozen - said
North end of island ave. 12±
and south end 10#±

Had real heavy fishing
within an hour of Kodiak
up until latter part Sept.
31,000 crabs in 30 days?

K L M N O P Q R S T U V W X Y Z

Foremost came in with 5000# crabs from Alitak on 14th; seemed lighter than Kodiak crabs. ~~To~~

10/15

Jake & Al dissected & injected crabs at Port Wakefield. The muscular is thinner seems to be of a vascular nature except up & back under the curve of the posterior shell margin. Seems to be as tough there as anywhere.

Cutting notches in the shell worked fairly well at the top of the abdomen and along the rear edge of the carapace. It gives a total of 7 positions

4 Boats fishing here now: Foremost, Shelikof, must & ?. Plant handles 2000-2500 crabs per day

Silvers almost done in creek — few redskins reported.

To Do

① See about duck tags

② get sections of King crab made

③ See about trot lines
