

## **Excursion Inlet**

### **People and Place**

#### *Location*<sup>1</sup>

Excursion Inlet is located in the Haines Borough, on the west coast of Lynn Canal, 38 mi northwest of Juneau. The area encompasses 56.8 sq mi of land and 0.1 sq mi of water. Excursion Inlet is not incorporated, although it is under the jurisdiction of the Haines Borough.

#### *Demographic Profile*<sup>2</sup>

In 2010 there were 12 residents, ranking Excursion Inlet 341<sup>st</sup> of 352 Alaskan communities in terms of population size. Between 2000 and 2009 the population grew by 10.0% with an average annual growth rate of 4.57%, which was much greater than the statewide average of 0.75%. However, it should be noted that both overall population growth and average annual growth were significantly affected by the community's small population. Information regarding population trends can be found in Table 1.

Racial and ethnic composition in 2010 was predominately White. In that year, 75% of residents identified themselves as White, compared to 100% in 2000; and 25% identified themselves as two or more races, compared to 0% in 2000. In addition, 8.3% of residents identified themselves as Hispanic or Latino in 2010, compared to 0% in 2000. Information regarding racial and ethnic trends can be found in Figure 1.

In 2010, the average household size was 2.0, compared to 1.25 in 2000. In that year, there were a total of 71 housing units, compared to 85 in 2000. Of the households surveyed in 2010, 6% were owner-occupied, compared to 7% in 2000; 3% were renter-occupied, compared to 2% in 2000; 7% were vacant, compared to 1% in 2000; and 85% were occupied seasonally, compared to 89% in 2000. No residents were reported to be living in group quarters between 2000 and 2010.

Gender distribution in 2010 was even at 50.0% male and 50.0% female. This was more even than the statewide distribution (52.0% male, 48.0% female) and significantly more even than the distribution in 2000 (80.0% male, 20.0% female). The median age that year was 36.5 years, which was somewhat older than the statewide median of 33.8 years and significantly younger than the 2000 median of 60.0 years.

Figure 1. Racial and Ethnic Composition, Excursion Inlet: 2000-2010 (U.S. Census).

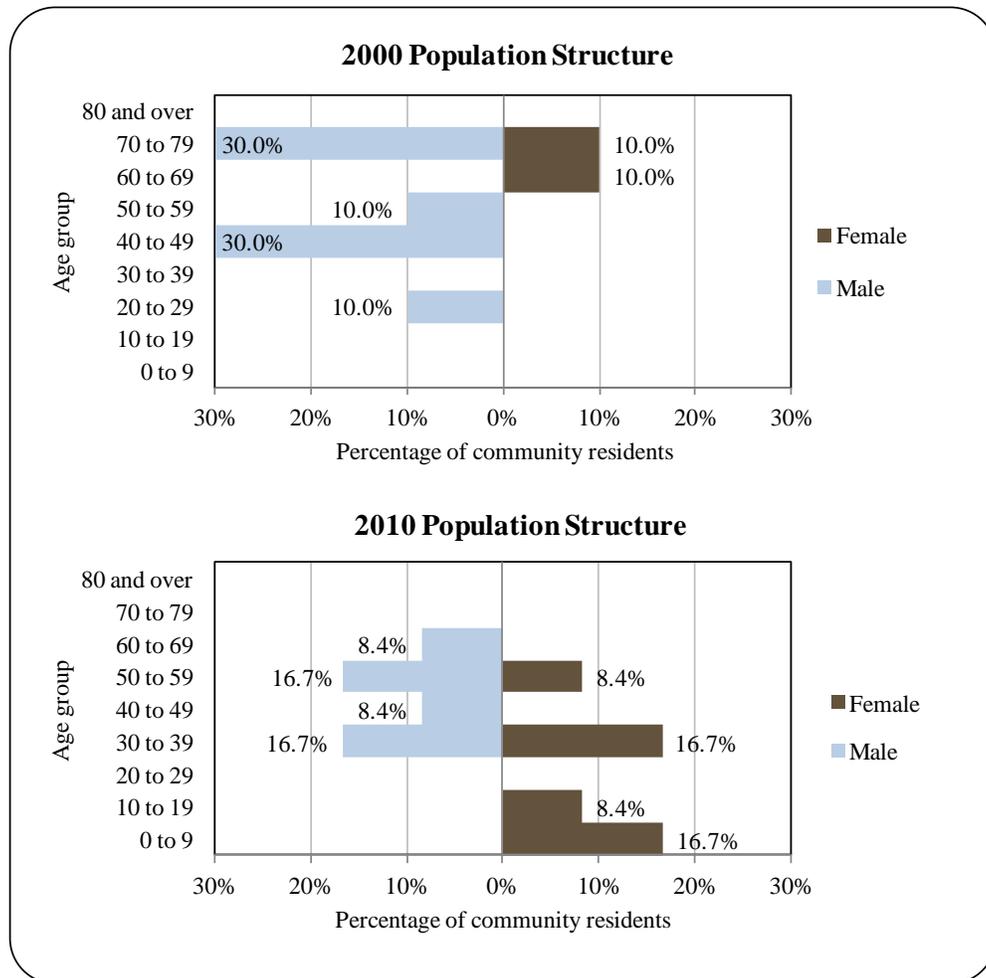

Gender distribution by age cohort was more even in 2010 than in 2000. In that year, female biases occurred in the 0 to 9 and 10 to 19 ranges, while male biases occurred in the 40 to 49, 50 to 59, and 60 to 69 ranges. Information regarding Excursion Inlet’s population structure can be found in Figure 2.

The population of Excursion Inlet is too small to discern a trend in its structure. In 2010, 25.1% of residents were under the age of 20, compared to 0.0% in 2000; 8.4% were over the age of 59, compared to 50.0% in 2000; and 66.9% were between the ages of 30 and 59, compared to 40.0% in 2000. No residents were between the ages of 20 and 29 in both 2000 and 2010.

In terms of educational attainment, the U.S. Census’ 2006-2010 American Community Survey (ACS) did not report estimates for 2010.

Figure 2. Population Age Structure in Excursion Inlet Based on the 2000 and 2010 U.S. Decennial Census.

### *History, Traditional Knowledge, and Culture*

According to oral history, the Woosh-Kee-Tawn Tlingits were the first occupants of Excursion Inlet. However, they were forced to abandon the area following a flood.<sup>3</sup> This account is similar to other oral histories in the area describing a period of glacial recession and outburst flooding in the Glacier Bay region beginning around 5,800 years ago.<sup>4</sup>

Two salmon canneries were originally built in Excursion Inlet in 1908. In 1935, Pacific American Fisheries (PAF) closed its plant. The other cannery facility burned in 1948. In 1941, the U.S. Army surveyed the area from a planned military facility. In 1942, construction of a trans-shipment point was started which would bring military supplies to Excursion Inlet. These supplies would then be transferred to military complexes in Kodiak and the Aleutians. The Army commandeered portions of the old cannery site without the permission of PAF. At peak construction, 2,760 civilians and 860 Army personnel were employed.<sup>5</sup> The military site was decommissioned in 1945 and offered land and remaining structures up for sale in 1946 and again in 1949. The Alaska Native Brotherhood and Sisterhood of Hoonah purchased one of the buildings, and repurposed it as a meeting hall. In 1948, PAFs Oregon and Puget Sound plants were destroyed in a fire. After losing those facilities, PAF converted a Landing Ship Tank vessel into a freezer and processing barge, which operated in Excursion Inlet for the 1949 and 1950 seasons. Land based seafood processing resumed in 1951.<sup>6</sup> The site was later purchased in 1965 by Ward Cove Packing Co., a Ketchikan based company. However, Ward Cove was forced to cease Alaska salmon operations in 2002 due to market conditions. The site was then purchased by Ocean Beauty Seafoods in 2003.

### **Natural Resources and Environment**

The area has a maritime climate characterized by cool summers and mild winters. Average summer temperatures range from 46 to 76 °F (8 to 24 °C); winter temperatures range from 13 to 36 °F (-11 to 2 °C).<sup>7</sup>

Excursion Inlet's topography was heavily shaped by glaciers. The Chilkat Peninsula is composed of Mesozoic greenstones, volcanic sandstones, mudstone, chert, and limestone. Soils are generally well drained, and include a thick organic layer over silts and gravels. The community itself is built on alluvial deposits. High relief topography surrounds the community. Densely forested areas comprise of a mix of Sitka Spruce and Western Hemlock. These stands dominate much of the environment, with limited concentrations of primarily birch hardwoods populating disturbed areas. Alpine tundra vegetation occurs above 3,000 ft. Understory

vegetation consist of berry bushes, devil’s club, alders, and willows.<sup>8</sup>

Terrestrial mammals and fur-bearers in the region include brown and black bear, mountain goat, wolf, lynx, mink, martin, muskrat, otter, weasel, and wolverine. Marine mammals include humpback and orca whales, dolphin, seals, and sea lions. Economically or culturally important fish species include all five species of Pacific salmon, halibut, Dolly Varden, cutthroat trout, rockfish, herring, cod, sablefish, shrimp, and crab.<sup>9</sup>

Minerals found in the greater Haines Borough include gold, zinc, lead, copper, silver, barite, iron ore, and titanium. Marble, clay, sand, and gravel are also present. Regional mineral projects include the Porcupine Mineral District, Glacier Creek, and Kensington Gold Mine. Six prospects of gold, copper, silver, zinc, barite, and cobalt are found on the Chilkat Peninsula.

Excursion Inlet is relatively protected from most environmental hazards. However, the community is susceptible to earthquakes, coastal flooding, tsunamis or seiche waves, and mass wasting (land slides).<sup>10</sup>

According to the Alaska Department of Environmental Conservation,<sup>11</sup> there were no significant contaminated sites or environmental cleanup operations within Excursion Inlet as of 2010.

## **Current Economy**<sup>12</sup>

Excursion Inlet’s economy is almost entirely focused on the Ocean Beauty Excursion Inlet Cannery, which began operations in 2003. The 2006-2010 ACS did not report employment or income estimates for 2010 nor did the Alaska Local and Regional Information (ALARI) database maintained by the Alaska Department of Labor and Workforce Development (DOLWD).<sup>13</sup> Because of this, trend data are unavailable. In 2000, 100% of employed residents worked in manufacturing sectors and 100% held management or professional positions. Information regarding local employment can be found in Figures 3 and 4.

## Governance

Excursion Inlet is unincorporated, which bars it from administering any taxes or fees. In addition, the community was not included in the Alaska Native Claims Settlement Act (ANCSA) nor is it a federally recognized Native village. However, the community is under the jurisdiction of the Haines Borough, which administered a 5.5% sales tax, 11.26 mills median property tax, and 4% accommodations tax in 2010. The closest National Marine Fisheries Service, Alaska Department of Fish and Game (ADF&G), and U.S. Bureau of Citizenship and Immigration Services offices are located in Juneau, 38 mi southeast.

## Infrastructure

### *Connectivity and Transportation*<sup>14</sup>

The area is not accessible by road. A public seaplane base is available. Scheduled flights are available through Wings of Alaska. Roundtrip airfare between Juneau and Excursion Inlet in June 2012 was \$150.<sup>15</sup>

### *Facilities*<sup>16</sup>

No public facilities or services exist in Excursion Inlet. Less than 10% of all homes in this area are used year-round. All lack complete plumbing.

### *Medical Services*<sup>17</sup>

No medical services are available in Excursion Inlet. The closest hospital is located in Juneau.

### *Educational Opportunities*<sup>18</sup>

No education services are available in Excursion Inlet.

## **Involvement in North Pacific Fisheries**

### *History and Evolution of Fisheries*<sup>19</sup>

Historically, commercial fishing in the area was tied to Icy Strait, Glacier Bay, and the outer coast (including Lituya Bay). The Barlett Cove cannery built in 1890, and Dundas Bay Cannery built in 1900 predated seafood processing in Excursion Inlet. In the 1940s, two fish traps were located in Icy Strait waters off Point Dundas and Point Gustavus. Crab and halibut fisheries were developed around the same time. The earliest report of shrimp fishing in Glacier Bay was in 1952. Salmon, halibut, crab, and shrimp fishing remained small-scale into the 1970s; however, by the 1980s fishing was intensified. In 1975, the International Pacific Halibut Commission (IPHC) reduced the halibut season from 128 days to 5 days. On opening day of halibut season in 1983, over 100 long liners were estimated to be fishing in Glacier Bay.

During this time, the U.S. National Park Service (NPS) was reassessing its management of commercial fishing in National Parks. Friction between fishermen and the NPS intensified over an opinion in 1982 by the Interior Department Solicitor contending that commercial fishing should not be allowed in Glacier Bay under the Alaska National Interest Lands Conservation Act (ANILCA). This was interpreted based on the prohibition of non-recreational commercial uses of wilderness areas contained under the Wilderness Act of 1964. This created contention between the NPS and Alaska Attorney General's Office over jurisdiction of submerged lands and authority to regulate commercial fishing in park waters. Alaska's Attorney General argued that submerged lands had been transferred to the state under the Alaska Statehood Act; a claim which was rejected by the Interior Department.

Proposed rules outlining the closure of Glacier Bay to commercial fishing was submitted to the Federal Register by the NPS in 1983. Commercial fishermen argued that the proposed rules were arbitrarily targeting commercial vessels, as sportfishing was not included. The regulations initially proposed by the NPS were ultimately abandoned under political pressure. Negotiations began between the NPS, commercial fishing industry, environmental interests, and other interested parties over new regulations. It was the goal of the NPS to come to an agreement with stakeholders over which areas to exclude from the proposed wilderness area. While consensus was never reached, the negotiations did produce a foundation for the NPS's wilderness recommendation. However, regulations established that same year by the Redwood National Park Act of 1978 prohibiting commercial fishing in National Parks went unnoticed and un-contested by most NPS and Alaska officials. Although then Interior Department Solicitor Roy Spadley Jr. claimed that regulations did not apply to Glacier Bay, NPS officials were skeptical.

By the late 1980s, the NPS was facing intense scrutiny by both Alaska's congressional delegation and the Reagan administration over ANILCA and humpback whale protection measures limiting vessel entrance into Glacier Bay. At that time, commercial fishing had grown

---

<sup>18</sup> Alaska Department of Education and Early Development. (2012). *Statistics and Reports*. Retrieved April 24, 2012 from <http://eed.alaska.gov/stats/>.

<sup>19</sup> Catton, T. (1993). *Glacier Bay Administrative History*. Retrieved May 25, 2012 from <http://www.gustavushistory.org/articles/booksnarticles.aspx>.

the point that the NPS felt conditions were threatening their mandate to preserve the park as an ecological reserve. In addition, defunding by a hostile congress made it difficult for the agency to fulfill its mandates while addressing the interests of stakeholders. In 1988, the NPS completed the wilderness recommendation Environmental Impact Statement and presented it for public comment. The chosen recommendation favored a phased termination of commercial fishing for NPS waters. This was influenced by the NPS's waning political capital and the endless political difficulties and litigation that would likely result from the complex management approach born from negotiations in 1983. By 1989, residents of Hoonah were pursuing subsistence fishing rights in Glacier Bay; a tactic which non-Native fishermen from Gustavus, Hoonah, Elfin Cove, and Pelican would attempt as well. In 1990, it was decided that commercial fishing would be phased out in Glacier Bay and ending on December 31, 1997. The phase-out was implemented to lessen the economic impact on communities dependent on fisheries within the park. However, traditional and accustomed subsistence practices were still allowed within the park under ANILCA, as on all federal lands and navigable waters.

The area around Excursion Inlet is located in Federal Reporting Area 659, International Pacific Halibut Commission Regulatory Area 2C, and the Eastern Gulf of Alaska (GOA) Sablefish Regulatory District.

### *Processing Plants*

Ocean Beauty acquired the Excursion Inlet seafood processing facility in 2003. The plant itself was established in 1908 by another company. The Ocean Beauty plant generally operates from late June to mid-September and processes pink and chum salmon, as well as salmon roe, salmon caviar, halibut and black cod. The Excursion Inlet facility provides free room and board as well as free air transportation from and to Seattle to all seafood processing workers who fulfill their contractual obligations. Living accommodations include access to laundry facilities as well as free weekly linen laundry service, and shared bathroom facilities. Ocean Beauty also provides free protective work clothing to its workers.<sup>20</sup>

### *Fisheries-Related Revenue*

No fisheries-related revenue was collected in Excursion Inlet between 2000 and 2010 (Table 3).

### *Commercial Fishing*

In 2010, one resident, or 8.3% of the population, held one salmon permit issued by the Commercial Fisheries Entry Commission (CFEC). In 2000, four residents held two salmon and two crab CFEC permits. No residents held Federal Fisheries Permits (FFP) or License Limitation Program (LLP) permits between 2000 and 2010. In addition, no residents held halibut, sablefish, or crab quota share between 2010 and when the programs began.

No residents held commercial crew licenses in 2010, compared to one in 2000. In addition, no residents held primary ownership of any vessels that year, compared to three in 2000. Of the CFEC permits held in 2010, none were actively fished, compared to 25% in 2000.

---

<sup>20</sup> Ocean Beauty. (n.d.). Retrieved May 2012 from <http://www.oceanbeauty.com/about/xip.htm>.

No permits were actively fished between 2004 and 2010.

In 2010, 7.73 million pounds of salmon were landed in Excursion Inlet valued at \$5.36 million, compared to 12.21 million pounds valued at \$3.71 million in 2005; an increase of \$0.35 per pound after adjusting for inflation<sup>21</sup> and without considering the species composition of landings. All other years are considered confidential. Landings reported by residents of Excursion inlets are considered confidential for 2000 through 2005. No landings were reported by residents between 2006 and 2010. Information regarding commercial fishing trends can be found in Tables 4 through 10.

### Recreational Fishing

Recreational fishing is not an important part of Excursion Inlet’s economy. Between 2000 and 2003, there was one registered sport fish guide business. In addition, there were no registered charter operators in the community between 2000 and 2010. One resident held a sportfishing license in 2010, compared to four in 2000. No sportfishing licenses were sold in the community between 2000 and 2010 (Table 11).

Excursion Inlet is located in the Glacier Bay ADF&G Harvest Survey Area which includes all waters of Alaska, including drainages, south of Cape Fairweather to and including Chichagof drainages into Icy Strait and Cross Sound, west of Point Couverden and the Haines Borough boundary. In 2010, there were at total of 29,025 saltwater angler days fished and 2,990 freshwater angler days fished, compared to 38,126 and 3,249 in 2000, respectively (Table 11). In that year, non-Alaska residents accounted for 80.4% of saltwater angler days fished, compared to 57.8% in 2000. In addition, non-Alaska residents accounted for 78.5% of freshwater angler days fished, compared to 37.9% in 2000.

*Subsistence Fishing*

Subsistence fishing was once an important way of life for the Tlingit people who originally lived in the area. However, Excursion Inlet is not considered a subsistence based community by more recent standards. Information regarding subsistence participation is extremely limited. No data are available for household participation in subsistence activities. The only recorded data for salmon harvests comes from 2000 when residents reported harvesting 20 sockeye salmon on two subsistence salmon permits. Between 2003 and 2007, two residents held Subsistence Halibut Registration Certificates (SHARC), although no halibut was harvested in those years. No data are available regarding marine mammal harvests. Information regarding subsistence trends can be found in Tables 12 through 15.
